# SOLUZIONI FOODSERVICE

- Clean, spotless glasses, white plates, and cutlery
- Eliminates the need for hand retouching
- Extends the life of your dishwasher by reducing limescale deposits
- Economical: lower maintenance and repair costs
- Ideal for hot water applications (up to 60°C)
  
- Technology: partial demineralization
- Capacity at a temporary hardness of 10° dH (0% mixing): 12,000 l
- Maximum operating pressure: up to 6 bar
- Operating position: horizontal or vertical

## FILTRATION:

The reliable BRITA filtration technology system demineralizes water step by step:

- Pre-filtration: A fleece retains large particles. Furthermore, its water distribution system ensures optimal use of downstream filter components.
  
- Reduction of temporary hardness: The filter components reduce temporary hardness to prevent limescale formation.
  
- Fine filtration: Finally, a fleece retains the remaining fine particles.
  
- IntelliBypass Technology: The unique IntelliBypass technology allows for a constant mixing water ratio regardless of the volumetric flow. This ensures consistently optimal water quality, especially when using low water volumes.
