

## PROFESSIONAL OSMOSIS FOR DISHWASHERS AND GLASSWASHERS MOD. SYNCRO2+ - SINGLE-PHASE 230V

SYNCRO2+ Professional Reverse Osmosis System, Single Phase, 230V, for Dishwashers and Glasswashers

vedi prodotto online

CODICE: SYNCRO2+

# SOLUZIONI FOODSERVICE

The SYNCRO2+ is a professional reverse osmosis system designed to ensure pure water, high performance, and maximum reliability in the most demanding work environments. Ideal for professional dishwashers and glasswashers, it represents an advanced water treatment solution for the Ho.Re.Ca. and industrial sectors.

## Extensive connectivity and intelligent control

The integrated Modbus module enables efficient and secure communication with secondary systems, such as dishwashers and glasswashers.

Thanks to this protocol it is possible to:

- Monitor operational status in real time
- Check pressure and flow rate
- Send commands to adjust settings

A system designed for those who want total control, automation and advanced integration.

## High-level performance

Performance is the real strong point of Think:water.

The SYNCRO2+'s advanced filtration technology ensures superior water purity by effectively removing impurities, salts and contaminants.

Designed for industrial and professional use, the reverse osmosis system guarantees:

- Consistent and reliable results
- Better equipment protection
- Ideal water quality for impeccable washing results

A new benchmark in water treatment.

## Unparalleled compactness

Small spaces? No problem.

The SYNCRO2+ is born from a project that combines compact design and production efficiency, without compromising on performance.

- Ideal for professional environments with limited space
- Easy integration into kitchens and laboratories
- Maximum efficiency with minimum space requirements

## PROFINE® COBALT pre-filtration

The PROFINE® COBALT filter ensures high-quality pre-filtration, essential for protecting RO membranes:

- Reduces unwanted odors and tastes
- Eliminates turbidity and chlorine
- Nominal filtration 5 microns
- Scale inhibitor technology
- Low pressure drops

An ideal solution for extending the life of membranes and maintaining high performance over time.

## Optimized visibility and usability

The interface has been designed with an ergonomic inclination, which ensures optimal visibility

# SOLUZIONI FOODSERVICE

of the controls and parameters, eliminating the need to crouch or assume uncomfortable positions. A detail that makes the difference in everyday use.

RO modules: maximum hygiene and simplified maintenance

The RO modules allow you to configure the hydraulic circuit to obtain:

- Optimal pressure
- Quick membrane change
- Maximum system hygiene

The result is an efficient, safe and easy to maintain system.

SYNCRO2+ is the ideal choice for those looking for:

Pure and constant water

. Advanced control and connectivity

Compact and professional design

Reliability over time
