

**10 kg pack of regenerating salt in tablet form  
(net price)**

Pure Salt Tablets for Water Softeners (10 kg Pack)

# SOLUZIONI FOODSERVICE

Protect your appliances and systems from limescale with ultra-pure salt tablets. Ideal for regenerating water softener resins, this compacted salt ensures regular and consistent dissolution, optimizing the effectiveness of water treatment and extending the life of your equipment.

**INTENDED USE AND APPLICATIONS** This product is specifically designed for filling water softening systems, both for domestic and professional/industrial use: - Ion exchange water softeners.

- Water treatment systems for boilers, washing machines, professional dishwashers, and catering equipment. - Sales name: Ultra-pure compacted salt for water softeners. **STRENGTHS AND BENEFITS**

- Ultra-pure and High Yield: Made with the highest quality salt, free from impurities that could deposit in the tank or damage the softener valves. - Tablet Format: The compacted form is specifically designed to prevent the formation of salt bridges in the tank, ensuring a consistently homogeneous brine and gradual dissolution without waste. - Maximum Limescale Protection: Impeccably regenerates the softener resins, ensuring soft water that prevents limescale buildup on pipes and heating elements. - Practical Format: The 10 kg bag is ideal for those looking for a supply that is convenient to handle and easy to store, excellent for both the home and small workshops or commercial businesses. **RECOMMENDATIONS FOR USE AND STORAGE**

To obtain maximum performance from your system and preserve the integrity of the product, we recommend following these guidelines: - Efficiency tip: For perfect operation of your softener, periodically check the tank and always keep the salt level at the maximum permitted level. - Correct storage: Salt is a highly hygroscopic product (it tends to absorb humidity from the air). Store the bag in a dry, cool, and moisture-free place to prevent the tablets from hardening or clumping. **TECHNICAL DATA SHEET IN BRIEF** - Contents: 10 kg bag. - Type: Water softening salt in compacted tablets/cylindrical form. - Physical state: Solid, very pure.
