SOLUZIONI FOODSERVICE

The strawberry, a universal icon of pleasure, freshness, and refined pastry making, comes to life in your creations thanks to the 3D Strawberry and Cream silicone mold from Silikomart's 3Design line. This professional mold has been meticulously designed to allow you to create incredibly realistic single-serving desserts, capable of delighting the eye even before the palate. Perfect for enhancing pastry shop windows or wowing guests at the table, this tool will allow you to offer fresh, inviting, and geometrically flawless desserts that will be truly hard to resist. The secret of 3D realism: the patented internal border. Like all the premium molds in Silikomart's 3Design line, this model also stands out for its revolutionary internal border. This special curvature delicately rounds the base of your single-serving desserts during demoulding, completely eliminating sharp edges and imperfections. The result is a soft, smooth, three-dimensional dessert that is true to the fruit's natural shape, ideal for finishing with a glossy mirror glaze or an elegant velvet spray effect. Professional performance from freezer to oven. Made from 100% premium-quality platinum liquid silicone, the mold guarantees maximum versatility and reliability at every stage of your pastry making:

- For semifreddo, mousse, and ice cream: It easily withstands the harshest temperatures of the blast chiller and freezer. The exceptional flexibility of platinum silicone allows for smooth and quick demoulding, protecting every detail of the strawberry intact.
- For baked preparations: Thanks to excellent thermal stability, it is perfect for baking small cakes, soft biscuits, or original baked inserts.
- Maximum safety and hygiene: The mold is completely safe for your health, certified BPA-free and PFAS-free. It does not alter the flavors of your recipes and is dishwasher-safe, specifically designed to withstand the intense pace of professional laboratories.
