CODICE: 028010206822

SOLUZIONI FOODSERVICE

CE certified and compliant with UNI EN ISO 13998:2004 and UNI EN 1082-1:1998 standards

The stainless steel mesh aprons have been designed to protect operators who handle knives and sharp objects against injuries such as cuts during boning, processing of plastic materials, leather, etc.

Aprons help prevent accidents and protect those parts of the body that are covered by metal mesh.

The aprons are made of stainless steel. Contact with electric current should be avoided due to the high conductivity of the material. Protection against injury cannot be guaranteed when working with machines equipped with electric blades, saws or knives. The safety apron will only provide protection in the case of a knife with a minimum blade width of 10mm at a distance of 20mm from the tip of the knife.

CLEANING AND STORAGE

Aprons and drawstrings should be cleaned with warm water (50°C) and a neutral detergent immediately after use. Machine washing gives excellent results. Finally rinse with hot water (approx. 85°C)

After drying, spray a suitable disinfectant and leave it to act for a few minutes. Then store in a clean, dry and well-ventilated place.
