SOLUZIONI FOODSERVICE

TECHNICAL FEATURES:

- Enamelled and non-stick sheet metal production material
- Enamel applied at 800°C after chemical washing which allows perfect adhesion.
- Excellent resistance to thermal shock.
- Quality guaranteed by passing 3 quality control tests

USE:

Enamelled surfaces are characterized by a strong reduction in adhesion capabilities. Thanks to this, for example, the biscuits come off the tray without any problems. Furthermore, the scratch-resistant surface is also ideal for baking and roasting in the Gastronorm container and for subsequent cleaning.

Ideal for all types of cooking where long times and high temperatures are required.

WASH:

Possibility of washing in the dishwasher. Thorough drying is recommended.

Product made in Italy
