

ROUND ALUMINUM LID diameter cm. 50

SOLUZIONI FOODSERVICE

HANDLE:

in 18/10 stainless steel tubular, non-conductive of heat and applied to the body with AG5 alloy rivets.

THE ASSETS:

- Energy saving of heating sources.
- Safety from the hygienic point of view.
- Compliance with laws on containers in contact with food.
- Lightness thanks to the reduced specific weight.
- Convenient quality-price ratio.

USEFUL TIPS:

It is suitable for all types of cooking, especially those that require prolonged times and constant temperatures. The dark patina that forms inside the aluminum lid is determined by the spontaneous oxidation of the metal: a real inert protective barrier that must not be eliminated. For those who always want to have shiny lids, they must use specific products.
