

PERFORATED EXOGLASS SPATULA cm.16x9x30

SOLUZIONI FOODSERVICE

Matfer has always been at the forefront in the study of products for professional catering.

For some years it has developed a new plastic material, exclusively manufactured: exoglass.

It is a compact, non-porous material that is pleasant to the touch and easy to grip. Rigid and non-deformable, very light, highly durable, stainless, it is suitable for use in the dishwasher, refrigerator, microwave and oven. In fact, it can be used from -20° to $+250^{\circ}$.

In cooking moulds, it ensures excellent heat diffusion, rapid reduction of the temperature of the mold after use, and easy washing.

In kitchen tools (whips, spatulas, etc.) it allows extreme use at the highest temperatures, making the various tools in the Matfer collection ideal for use with non-stick cookware and in the kitchen of the demanding professional, both cook and pastry chef.
