SOLUZIONI FOODSERVICE

This appliance has cutting-edge technical characteristics and design. Motor with low weight but great performance with thermal protection. Electronics with stabilizer and speed variator with continuous use function. The Giò Light series stands out, above all, for the rapid tool coupling, but also for the meticulous attention in the choice of materials for the assembly. In fact, all the parts that come into contact with food have been made in stainless steel. The tool coupling cap is made of aluminium. The motor body in food grade plastic.
