MARCA: **AGNELLI**

SOLUZIONI FOODSERVICE

The body of the pan is made of 3mm pure aluminum coated internally with adherent SHARK SKIN® and externally with a satin ferritic steel sheet.

This new HORECA line boasts a perfect and universal inductive coupling with induction cookers guaranteeing operation even at maximum power; this translates into faster and more uniform heat generation throughout the pan compared to other types of induction bases.

The high non-stick qualities given by the high thickness of the non-stick layer (greater 300% compared to a normal sprayed non-stick) give this product unprecedented longevity.

Pros of induction:

Fresh kitchen environments

No firefighters allowed

No gas

High cooking speeds

Cooking at high temperatures

Technical peculiarities

It allows the stove to function optimally, always delivering the power set by the kitchen professional.

The body is made of material characterized by high thermal conductivity ensuring a uniform temperature of the cooking tool.

Innovative non-stick coatings capable of resisting wear from abrasion and high temperatures and providing unprecedented durability.
