SOLUZIONI FOODSERVICE

Nitrile gloves have mechanical resistance characteristics (especially to perforation) and chemical resistance that are superior to latex gloves, while maintaining excellent elasticity, an aspect that is always highly appreciated in disposable gloves, as it confers sensitivity and ergonomics.

Nitrile gloves are therefore preferable for those jobs where greater mechanical and chemical resistance is necessary, as well as for those who are allergic to natural latex proteins.

Disposable Nitrile gloves are also suitable for contact with various types of foods (with the exception of alcoholic foods - which are rarely found in nature) and are therefore increasingly used for handling food products.

WEIGHT SIZE M gr.3.5 (+/- gr.0.2)

CHARACTERISTICS:

- Nitrile material
- Dustless
- AQL1.0
- Long sleeve mm. 240
- Textured fingers
- Internal chlorination
- Ambidextrous shape
- Tear-saving cuff
- Not Sterile
- Ministerial Decree Class I Dir. 93/42/EEC Dir. 2007/47/EEC
- PPE IIIa Cat. Dir. EEC 89/686
- Test: EN 455 I-II-III-IV - EN 374 I-II-III
- ASTM F 1670-1671
