Discover the benefits of the product

Good to know: The pulse button is used when you need short bursts of power at the optimum speed. It can be used, for example, for an extra burst of blending at the end of a smoothie to make it creamier. The crushing function is used to crush solid foods such as nuts. .

The barista's Wave Action System is a true game changer. This innovative system repeatedly pushes the contents of the bowl towards the blades. This creates a continuous motion that ensures even and thorough mixing. There is no more manual stirring or shaking - the Wave Action System does the work for you and ensures that all ingredients are perfectly mixed.

Reliable sensors check that the lid is closed properly and that the container is positioned correctly. This prevents the appliance from being activated.

Version

Food Mixer

Made by Hamilton Beach, USA

For professional use in the catering sector

Capacity: 1.40 l

2.4 HP high torque traction motor

Chop and pulse function
